

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

NELSON STEPHEN L. VENTURA, & PIYATIDA RUANGRASSAMEE

Department of Water Resource Engineering, Faculty of Engineering

Chulalongkorn University

Bangkok, Thailand

OUTLINE OF THE PRESENTATION

- Introduction
- Study Area and Data
- Methodology
- Results and Discussion
- Conclusion and Recommendation

INTRODUCTION

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

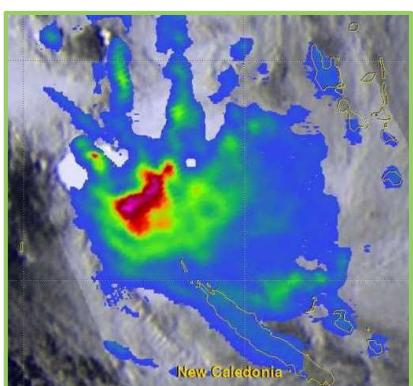

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL RAINFALL

SPATIAL RAINFALL

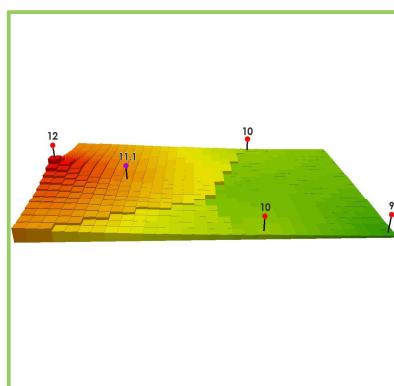

- Presents the **spatial distribution** of precipitation in a given time period

SATELLITE PRECIPITATION

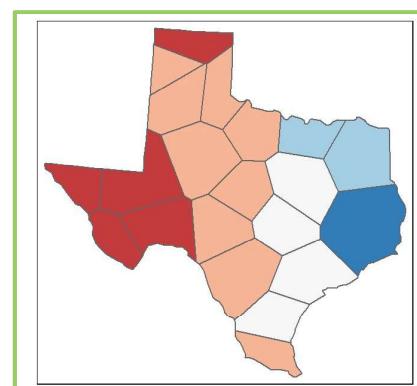

Source: <https://phys.org/news/2018-01-gpm-satellite-tropical-cyclone-fehi.html>

SPATIAL INTERPOLATION

Source: <https://gisgeography.com/kriging-interpolation-prediction/>

Source: <https://mgimond.github.io/Spatial/spatial-interpolation.html>

SATELLITE BASED RAINFALL

SATELLITE PRECIPITATION ESTIMATES

- Using satellite images to estimate the amount of rainfall in a designated time and area

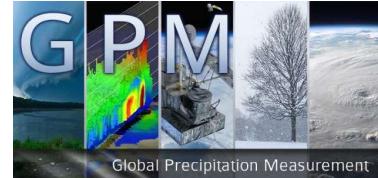

SOME SATELLITE RAINFALL PRODUCTS

CHRS PERSIANN

JAXA GSMap

NASA GPM IMERG

- Contains biases or errors that need to be corrected using ground-based data

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND
SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIALLY INTERPOLATED RAINFALL

SPATIAL INTERPOLATION

- Data from rain gages used as points to interpolate the amount of precipitation in locations without known values

INTERPOLATION APPROACHES

DETERMINISTIC

- Computes unknown values using mathematical functions
 - Example: Thiessen Polygons, Inverse Distance Weighing (IDW)
-
- For determining accuracy of the various methods, Cross Validation would be used to assess the interpolated data

STOCHASTIC

- Computes unknown values using the statistical properties of the dataset
- Example: Kriging

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND
SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

OBJECTIVE OF THE STUDY

The aim of the study is to...

- Identify the most adequate spatial interpolation method for Chao Phraya River Basin in Thailand
- Determine the correlation of the satellite-based precipitation to the interpolation output
- Identify how significant the bias of the satellite precipitation for correction

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

STUDY AREA AND DATA

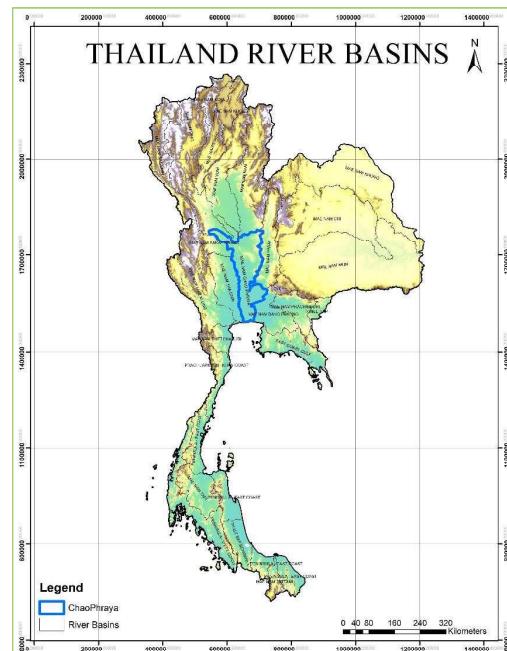

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

STUDY AREA – CHAO PHRAYA RIVER BASIN

CHAO PHRAYA RIVER BASIN

- Being the 9th largest of the 25 major river basins in Thailand (20,526.37 sq.km)
 - Where majority of the country's total productivity (agricultural, industrial, and service) is situated
 - The Chao Phraya River passes through Bangkok, the capital of Thailand

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

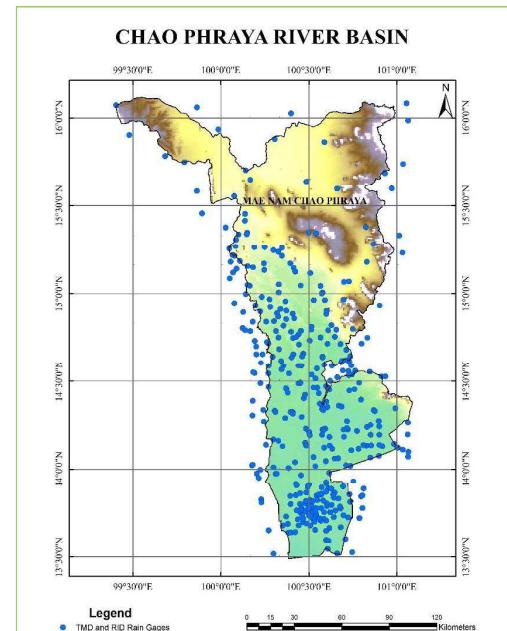

RAINFALL DATA

RAIN GAGE DATA

- Rain gages of Thai Meteorological Department (TMD) and Royal Irrigation Department (RID)
 - From 381 stations with daily precipitation records from 2000 to 2010

SATELLITE DATA

- Satellite-based rainfall data from Precipitation Estimation from Remotely Sensed Information using Artificial Neural Networks - Cloud Classification System (PERSIANN-CCS)
 - Resolution of 0.04 degree by 0.04 degree (approximately 4km by 4km) of year 2010

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

METHODOLOGY

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND
SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL INTERPOLATION

INVERSE DISTANCE WEIGHING (IDW)

- Using the **inverse of the distance** from the **known point to the unknown point** to estimate the precipitation

INVERSE DISTANCE WEIGHING (IDW) EQUATION

$$z^*(u) = \frac{\sum_{i=1}^n \frac{z(u_i)}{d(u_i)^k}}{\sum_{i=1}^n \frac{1}{d(u_i)^k}}$$

where:

$z^*(u)$ is the **predicted** value at the **location, u** ;

$z(u_i)$ are the **actual** values at each known **location, u** ;

$d(u_i)$ is the **distance** of the each known **location, u** , from the predicated value location;

k is the **exponent** of the distance weight

- In the study, **two** IDW interpolations were computed with values of the **exponents**; $k=1$ and $k=2$

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND
SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL INTERPOLATION

KRIGING AND SEMIVARIOGRAMS

- Similar to IDW, distance from known points to unknown points would be considered in Kriging but using Semivariogram models
- A Semivariogram is the representation of the spatial correlation of every point to each other in a given dataset

EMPERICAL SEMIVARIOGRAM EQUATION

$$\gamma(h) = \frac{1}{2n(h)} \sum_{i=1}^{n(h)} [z(u_i) - z(u_i+h)]^2$$

where:

$\gamma(h)$ is the variogram at the lag distance, h ;

$n(h)$ is the number of data pairs falling in the same lag distance, h ;

$z(u)$ is the value at location, u

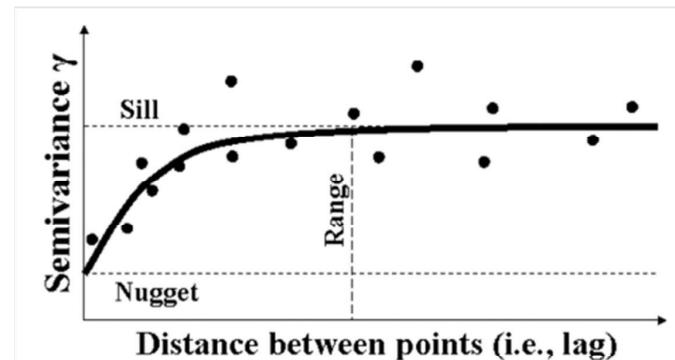

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL INTERPOLATION

SEMIVARIOGRAM MODELS

- Empirical semivariograms are non continuous; theoretical semivariograms from mathematical models would be used to fit the dataset to the function
- The theoretical semivariogram parameters are the sill, range, and nugget
- The Spherical, Exponential, and Gaussian semivariogram models were used in this study

Source: https://wiki.landscapetoolbox.org/doku.php/spatial_analysis_methods:semivariogram_analysis

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL INTERPOLATION

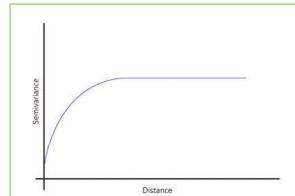

SEMIVARIOGRAM MODELS

SPHERICAL SEMIVARIOGRAM

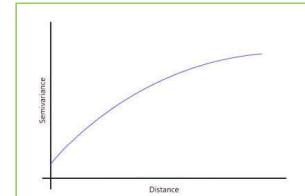

$$\gamma(h) = \begin{cases} c \left(\frac{3h}{2a} - \frac{1h^3}{2a^2} \right), & h \leq a \\ c, & h > a \end{cases}$$

where: c is the sill; a is the range

SPHERICAL

EXPONENTIAL

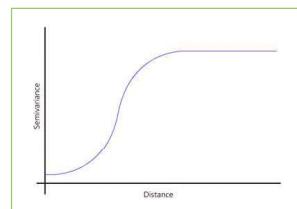

EXPONENTIAL SEMIVARIOGRAM

$$\gamma(h) = c \left[1 - e^{-\left(\frac{h}{a}\right)} \right], \quad h > 0$$

GAUSSIAN SEMIVARIOGRAM

$$\gamma(h) = c \left[1 - e^{-\left(\frac{h}{a}\right)^2} \right], \quad h > 0$$

GAUSSIAN

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SPATIAL INTERPOLATION

KRIGING AND SEMIVARIOGRAMS

- The study also tried to bin the pairs not only spatially but also temporally (monthly)
- Once the semivariogram parameters have been determined,

KRIGING EQUATION

$$z^*(u) = \sum_{i=1}^n \lambda_i \cdot z(u_i)$$

where:

λ_i is the Kriging weight for each known value determined from the semivariogram model
 $z(u)$ is the value at location, u

- The study considered the closest 5 points for the interpolation

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

CROSS VALIDATION

LEAVE-ONE-OUT CROSS VALIDATION

- Each **data point** is **removed** from the dataset **one by one** and would be treated as an **unknown** point to be computed using the interpolation method
- Computed and actual values were **statistically** compared using **Mean Absolute Error** (MAE), **Root-Mean-Square Error** (RMSE), and its **Correlation Coefficient** (CORR).

$$\text{MAE} = \frac{1}{n} \sum_{i=1}^n |z(u_i) - z^*(u_i)|$$
$$\text{RMSE} = \sqrt{\frac{1}{n} \sum_{i=1}^n [z(u_i) - z^*(u_i)]^2}$$
$$\text{CORR} = \frac{\sum_{i=1}^n [z^*(u_i) - \bar{z}^*][z(u_i) - \bar{z}]}{\sqrt{\sum_{i=1}^n [z^*(u_i) - \bar{z}^*]^2} \times \sqrt{\sum_{i=1}^n [z(u_i) - \bar{z}]^2}}$$

- Only days with **occurrence of rainfall** for both observed and computed was considered

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

SATELLITE DATA ANALYSIS

COMPARING SATELLITE DATA

- Similar to the cross validation, **MAE**, **RMSE**, and **CORR** were used
- The **interpolated output** and **satellite data** would be considered as **observed** and as **computed** respectively

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE

CHULALONGKORN UNIVERSITY

MONTHLY SEMIVARIOGRAM PARAMETERS

SEMIVARIOGRAM PARAMETERS

- The data pairs were **binned** for **every month** from **2000** to **2009**.
- This method provided **faster computations** compared to traditional Kriging methods

| MON | 2000 - 2009 | | | | | |

CROSS VALIDATION AT 2000 TO 2009

CROSS VALIDATION RESULTS

- Generally, IDW had **faster computations** than Kriging
- Kriging using the monthly semivariogram parameter was **faster** than the traditional daily Kriging which took twice as long

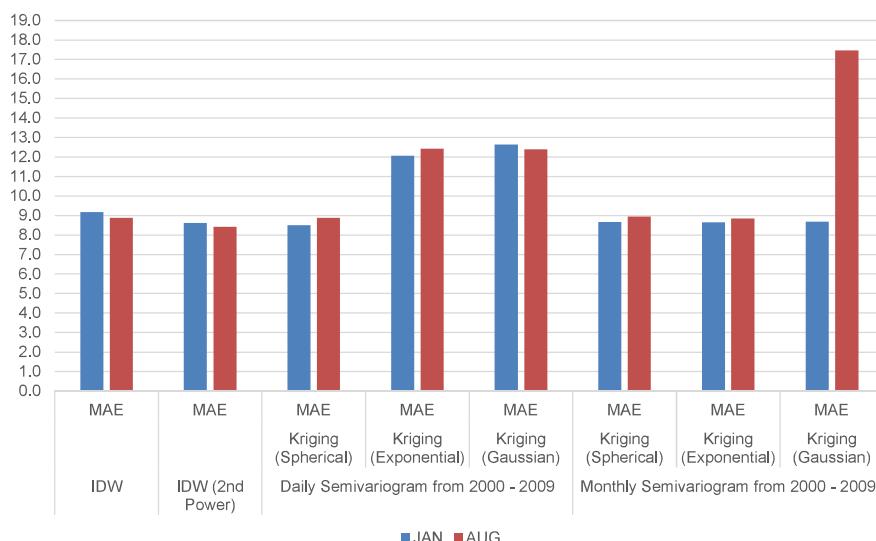

| MONTH | IDW | | IDW (2nd Power) | | Daily Semivariogram from 2000 - 2009 | | | | | | Monthly Semivariogram from 2000 - 2009 | | | | | | | |

CONCLUSIONS AND RECOMMENDATIONS

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

CONCLUSION AND RECOMMENDATION

CONCLUSION

- The Kriging with Spherical Semivariogram resulted the highest correlations and lower error values among the selected methodologies
- On the other hand, IDW interpolation provided more consistent results than Kriging with Exponential and Gaussian Semivariogram
- Of the three Kriging methods, the one with Spherical Semivariogram performed the best followed by with Exponential Semivariogram and then with Gaussian Semivariogram
- Using the monthly semivariogram for the same dataset instead of the daily semivariogram would be acceptable.
- The correlation between the satellite data and the interpolation output is quite low which demonstrate the need for bias correction.

CROSS VALIDATION OF SPATIAL INTERPOLATED RAIN GAGE AND SATELLITE-RAINFALL OVER CHAO PHRAYA RIVER BASIN THAILAND

N.S. VENTURA, & P. RUANGRASSAMEE
CHULALONGKORN UNIVERSITY

CONCLUSION AND RECOMMENDATION

RECOMMENDATIONS

- Using other more advanced interpolation techniques would be recommended as it may reduce the errors and increase the correlation of the cross validation and also the comparisons.
- Accounting for the temporal characteristic of rainfall in the interpolation would also be recommended.
