## 3 TYPES OF DROUGHT

### METEOROLOGICAL DROUGHT

*Meteorological Droughts* are region-specific; they occur when an area receives less rainfall than it normally should.

**Below** **Rainfall**  
**Normal**

### HYDROLOGICAL DROUGHT

*Hydrological Droughts* occur when there is a lack of surface and subsurface water supply.

**Below** **Surface Water**  
**Normal** **Groundwater**

### AGRICULTURAL DROUGHT

*Agricultural Droughts* occur when there is not enough moisture in the soil to sustain the growth of crops.

June-July-August 2024, Issued February 2024

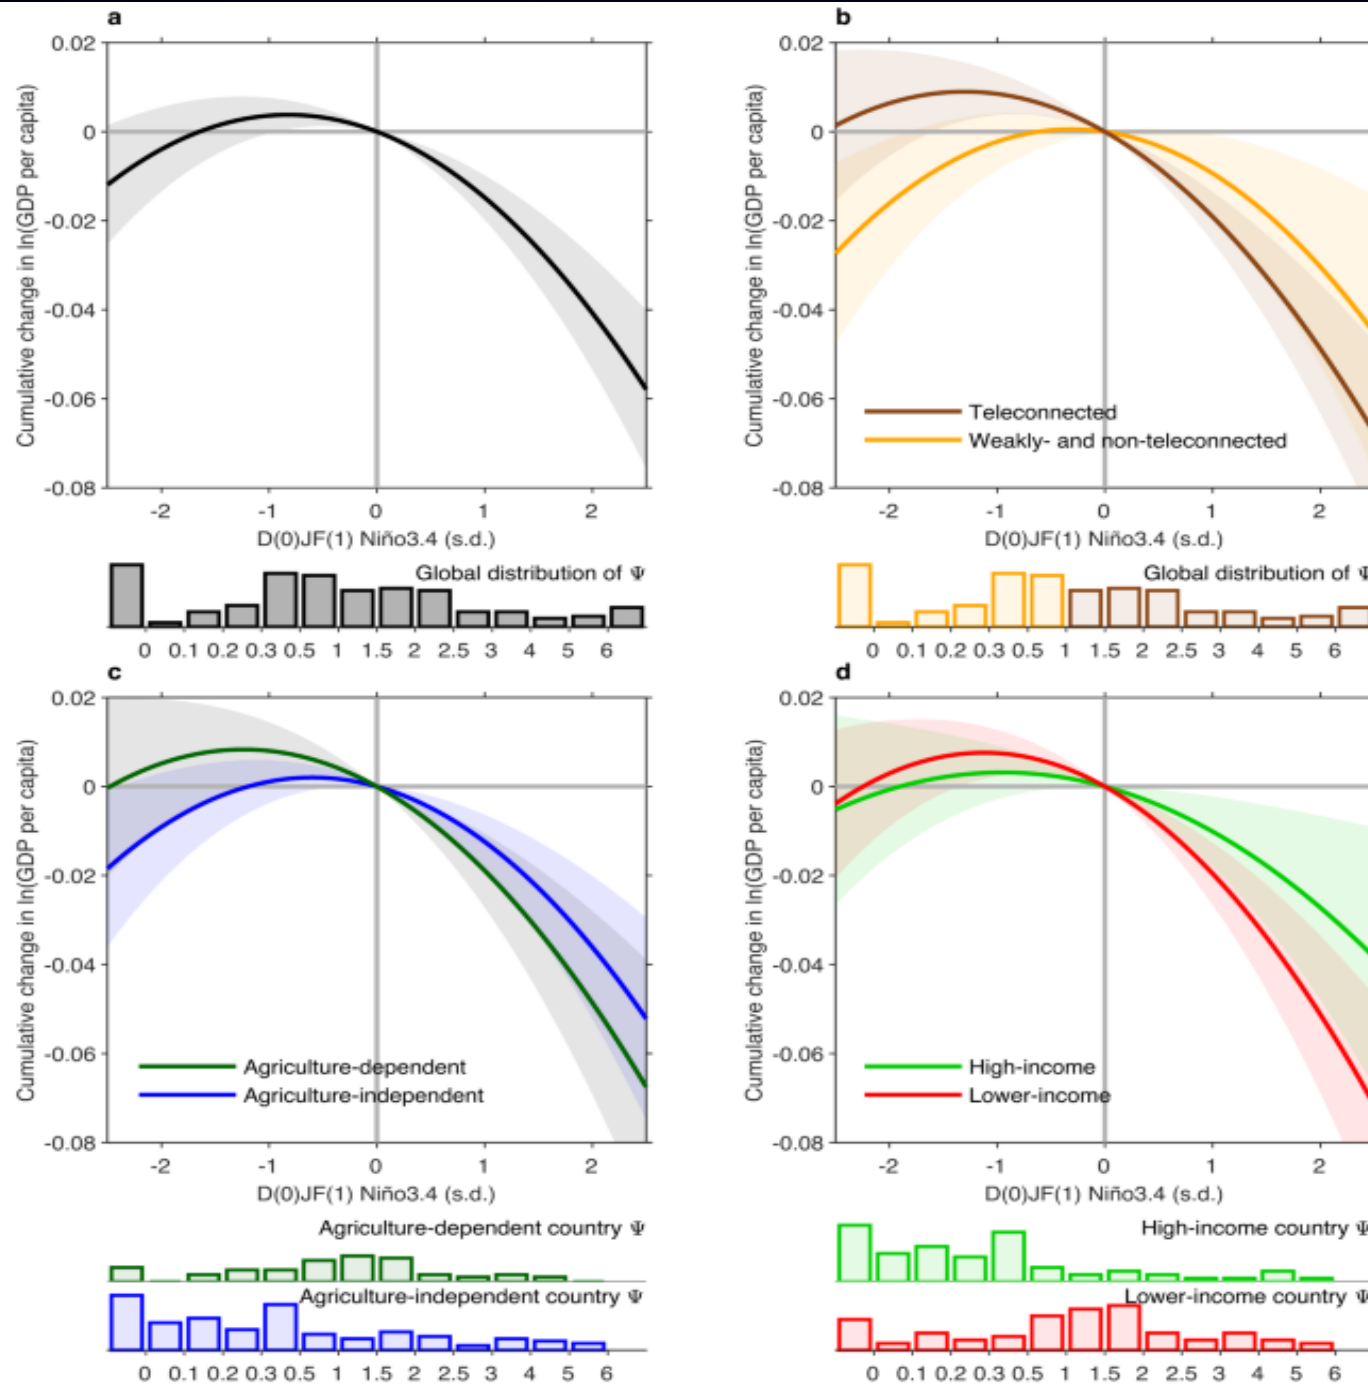

# Non-Linear Effect of ENSO on Global Economic Production (1960–2019)

There is a negative and statistically significant impact on economic growth during El Niño, but the impact is by and large insignificant for La Niña.

Both extreme El Niño and La Niña cause damage on economic growth, but the damage is far greater during El Niño than during La Niña; weak and moderate La Niña events produce a smaller benefit, which in amplitude is far smaller than the damage of weak El Niño events.

*Liu et al. (2023) Nature Communication.*

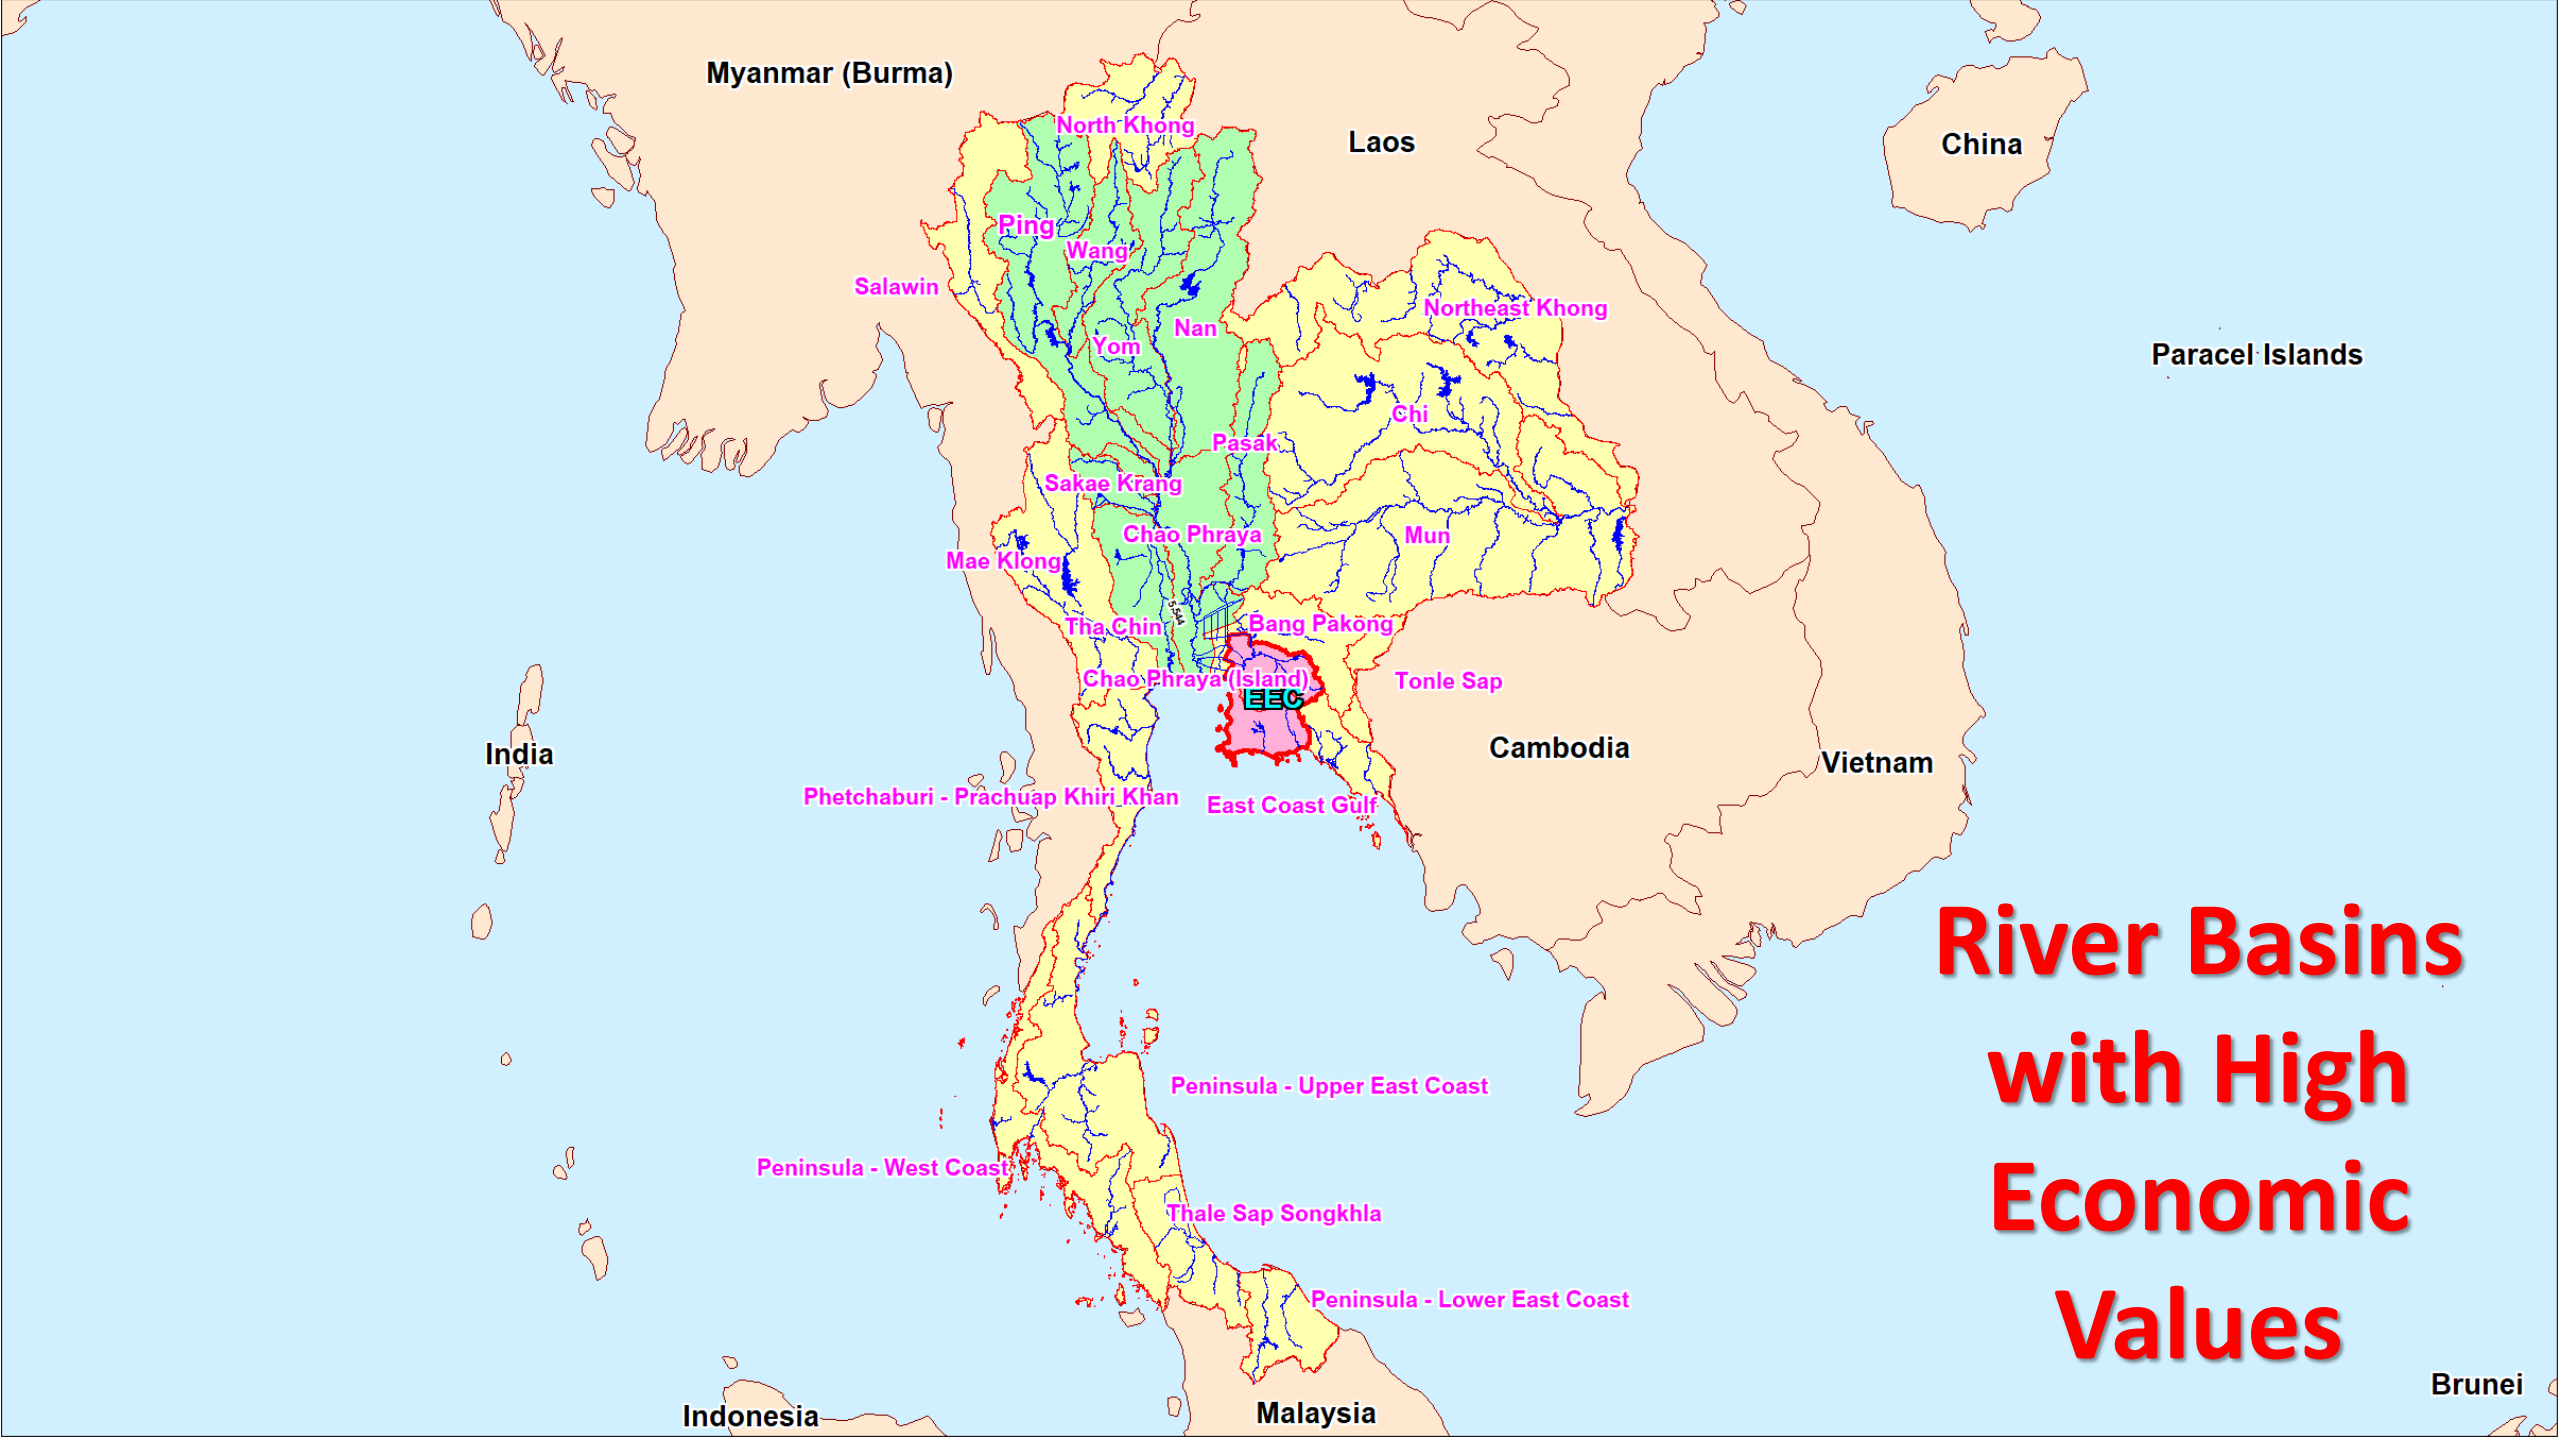

# Observed Economic Production Loss from ENSO

The contemporaneous loss amounts to US\$246, US\$401 and US\$739 billion for the extreme El Niño events of 1982–83, 1997–98 and 2015–16, respectively, (about 0.9–1.0% of global GDP at the time) in the El Niño occurrence year

# Data-Driven Solutions for Water Management and Policy

## Addressing Hydrological Challenges for Uncertain Future

### Policy

- Embracing Sustainability (SDGs)
- 20-yrs Water Resources Master Plan
- River Basin Master Plan
- Building Water and Climate Resilience

### Participation / Partnership

- Public Participation
- Public Acceptance
- Community-Based Adaptation
- Data Sharing

### Economics

- Water Pricing Reflecting Water Scarcity and Full Supply Costs
- Water Trading

**DATA**  
**Big Data**  
**Information**

**DATA Management**  
**Data Screening**

### Innovation / Technologies

- AI in Water
- Flood/Drought Forecasting
- Early-Warning System
- Leak/Loss Management
- Nature-Based Solutions

### Institutions and Laws

- Water Resources Act B.E. 2561
- Water Institution Reform
- Water Governance

### Finance

- Water Funds
- Integrated Budget (Central and Locals)
- Incentives
- Investing for Water Security
- Water Grids

Department Of Health (DOH)

Public health

Office of the Permanent Secretary, Ministry of Natural Resources and Environment

Natural resources management

Department of Public Works and Town & Country Planning (DPT)

Human settlements and security

## Water Resources Management

Increase water security and reduce loss and damage from water-related disasters

## Sectoral Indicators

## Agriculture and Food Security

Maintain productivity and food security

## Sectoral Indicators

## Tourism

Strengthen the capacity of the tourism sector towards climate resilience and sustainable growth

## Sectoral Indicators

## Public Health

Effective public health systems to manage risks and reduce impacts from climate change

## Sectoral Indicators

## Natural Resources Management

Sustainable management of biodiversity resources to respond to climate change impacts

## Sectoral Indicators

## Human Settlements and Security

Enhance capacity of individuals, communities, and cities, to adapt to Climate Change impacts appropriately according to the local opinion

## Sectoral Indicators

# Overall Performance by SDG 2023 - Global

### Description

The overall score measures the total progress towards achieving all 17 SDGs. The score can be interpreted as a percentage of SDG achievement. A score of 100 indicates that all SDGs have been achieved.

All data presented on this website are based on the publication Sachs, J.D., Lafortune, G., Fuller, G., Drumm, E. (2023). Implementing the SDG Stimulus. Sustainable Development Report 2023. Paris: SDSN, Dublin: Dublin University Press, 2023. 10.25546/102924
